Artificial Intelligence Project Management

Each student must write a brief reflection file (Reflection_Week02_<YourName>.md) including:

1. What did I contribute this week?

I helped coordinate the project statement and define the project process with the team. I also lent suggestions to make our plan clearer and more achievable.

2. What did I learn about collaboration or planning?

I learned the importance of staying focused, communicating clearly, and making precise decisions to keep the team aligned and productive.

3. What challenges did I face?

I struggled a bit with learning how to use GitHub and Miro since they were new to me, but I'm slowly getting more familiar with them.

4. What will I focus on next week?

I learned to appreciate the importance of staying on course, effective communication, and good decision-making in ensuring the group remains on course and productive.
